

PROFESSIONAL SERVICES

Optimization Accelerator

Improve your code and assets for efficiency and performance

Unity's Optimization Accelerator is a four-day sprint designed to boost your project's performance while equipping your team with knowledge and recommendations for best practices.

With hands-on guidance from a Unity engineer, you will analyze your project's performance problems, test solutions, and implement improvements.

Benefits

Better project performance

Measurable improvements in resource usage and load times

In-depth understanding of Unity best practices

Actionable next steps for further improvements

Customize your Optimization Accelerator

Focus area	Outcome
Load time	Improved app startup and scene transitions for a better user experience
Memory usage	Optimized memory utilization so you can achieve higher fidelity content, reduce crashes, and make room for more content
Application size (binary size)	Reduced application size that results in increased user acquisition and lower content distribution network (CDN) costs
Frame rate or runtime	Improved average and peak frame times (higher fps) for improved user experience and retention

"We relied heavily on Unity's professional services team for ongoing support and performance advice; they've been absolutely integral to the ongoing development of our game."

– Dann Webster, Engineering Lead, Legends of Runeterra, Riot Games

Why partner with Unity?

Working with us gives you direct access to the engineers who help build Unity and know the source code inside out. With intimate knowledge of the platform, we can provide you with strategic guidance and advice on technical implementations to help you future-proof your work.

You'll be supported by leading industry veterans with insight into market trends, emerging and adjacent technologies, and best practices. We are partners who stay laser-focused on making sure you succeed throughout your journey with Unity.
